

Tech Sheet

# Pointsharp Secure Information Exchange

[www.pointsharp.com](http://www.pointsharp.com)

## User-friendly

Pointsharp Secure information exchange is easy to use for anyone inside and outside the organization, leading to unprecedented user acceptance and minimizing the risk of shadow IT.

- No technical training is needed.
- Seamless integration into Outlook, Outlook on the web, and Notes.
- No installation is required for the sender or receiver.

## Secure

Email encryption with full traceability. Securely send large, confidential, and classified data with classification and eID support.

## Compliance

Make compliance a breeze with full transparency of transferred files. Pointsharp Secure information exchange provides a complete overview and reports where files were sent, who downloaded them, and the ability to re-

call emails sent to the wrong address.

Adhere to local, regional, and global rules and regulations, like GDPR, NIS2, and more, with our ISO 27001-certified software.

## Automation

Automate file transfers for mass distribution, one-to-many or many-to-many. System data transfers for any industry can be automated with the automation tools and APIs available in Pointsharp Secure information exchange.

## Challenge

Moving data today is connected to plenty of risks and regulations. Users should be able to send and receive all the data they need in the easiest way possible, yet organizations must make sure rules, regulations, and security requirements are met.

## Solution

Users can transfer files without effort, while administrative rules ensure all regulatory and security requirements are met.

## Features

- Web-App for ad-hoc usage
- Outlook add-in
- Outlook for the web add-in
- Notes and Domino Integration
- APIs
- Email classification
- File type filter
- Antivirus check
- Automated file sharing
- ISO27001 certified development

## Benefits

High user adoption

No file size restrictions

Secure & compliant

# Solution highlights

## Secure file transfers

With Pointsharp Secure information exchange, there is no need to use an FTP or worry about size restrictions for email clients. There is also no need to install software on the user's computer, whether they are sending or receiving. It also includes several means of protecting critical files.

With our QUICK technology, you can open a trusted communications channel between users. If files were sent to the wrong address, emails can also be recalled so that company data never gets into the wrong hands.

Naturally, files can also be password protected.

## High user acceptance

Pointsharp Secure information exchange is directly integrated into the organization's email client, so sending encrypted files is as easy as sending an email. The web application provides seamless transfer for other use cases and can also be fully automated if needed.

This removes the sometimes high technological barriers set up by other encryption solutions. With ease of use comes high user acceptance, leading to less shadow IT being used, which increases the overall security of an organization and its data.

## Automated file transfer

An organization's systems generate sensitive data and large files that need to be exchanged securely with contacts outside or inside the company.

Pointsharp Secure information exchange automation tools enable time- or event-triggered actions to single recipients or distribution lists.

Automate data transfer from industrial equipment, ERP systems, and web shops easily and securely. Pointsharp Secure Information Exchange supports both machine-to-machine and machine-to-human transfers.

## Suitable for all needs

Pointsharp Secure information exchange suits every type and size of the organization. It can be used as a Web App, integrated directly into Outlook and Notes, or other products, regardless of whether they are standard products or self-developed.

Run Pointsharp Secure information exchange on-prem, in a private cloud, or use our public cloud offer.

In addition, the Pointsharp Secure information exchange API offers deep integration possibilities with Java and .NET, as well as integrations with LDAP and Microsoft Dynamics 365 Business Central (formerly Dynamics Nav).

## Compliance

Pointsharp Secure information exchange is developed according to ISO27001-certified standards, providing trust and security. Pointsharp Secure information exchange also helps comply with regulations such as GDPR, NIS2, nDSG, eIDAS, HIPAA, NTA7516, FIPS-197, NIS2, WCAG, and others.

Unlike other secure communication solutions, Pointsharp Secure information exchange is designed to integrate into archiving and document management systems. This means full adherence to legal or industry-specific regulations regarding data archiving requirements.

## Low TCO

Getting Pointsharp Secure information exchange up and running within the organization's infrastructure can be done in a few hours, and our versatile APIs make it a perfect fit for most requirements. In addition, our user-friendly interface makes onboarding both admins and users extremely fast, saving enormous time and resources for the entire organization.

Our flexible solutions also make adapting to the existing organization easy, keeping costs under control from the start while the company evolves.

# Additional features

## Encryption

Data transfers between users and the Pointsharp Secure Information Exchange Server are TLS encrypted. Pointsharp Secure information exchange supports the latest TLS standards, such as Perfect Forward Secrecy and HSTS (HTTP Strict Transport Security) headers.

After a virus scan, the files are stored encrypted using the latest data encryption standards.

## Integrations

Pointsharp Secure information exchange integrations are available for several use cases:

### Ad-hoc communication with everyone

- Web App

### Email integration for frequent use

- MS Outlook
- MS Outlook on the Web
- Notes

### Custom integrations

- REST API
- JAVA API
- .NET API
- Robot, our Command Line Tool

## Technical summary

Pointsharp Secure information exchange is available as a web application for ad hoc use, email integration into Outlook or Notes, or integration into third-party software products. It can be run on-prem or in a private or public cloud.

## File type filter and antivirus

With file type filters, Pointsharp Secure information exchange ensures files are directly

transferred in the correct format. Our powerful policy engine can be used with type filter sets to control who can send what content to whom.

Pointsharp Secure information exchange also automatically scans transferred files for malware, adding an extra layer of security to an organization from incoming threats. ClamAV Antivirus Software comes pre-installed on all Pointsharp Secure information exchange products as standard.

## Flexible security options

The recipient can access encrypted files in different ways. Manage the security level according to organizational needs. Pointsharp Secure information exchange can provide access via link only, using one-time passwords, QUICK security tokens for long-term trust relationships, or even Electronic Identities (eID), so adapt to any security and usability needs.

## eID support

Pointsharp Secure Information Exchange supports eID authentication, like the Swedish BankID service. Thus, the solution is future-proofed for any upcoming EIDAS requirements on a European level.

## Email classification

Our built-in email classification solution for Microsoft Outlook allows the solution to classify outgoing messages according to the sensitivity of the content, as defined by the organization. With this feature activated, classifying emails is just as easy as transferring files.

This makes the solution compliant with the standards of GDPR and other regulations.

Pointsharp is a European cybersecurity company that enables organizations to secure authorizations, access, identities, and data in a user-friendly way. Security must be easy to use, and our vision is to give everyone access to a safe, modern digital workplace. We provide specialized IAM solutions that are made to fit the most demanding and specific needs.

We deliver European-made cybersecurity software and services to customers worldwide. You can often find our customers in large enterprises requiring extra high levels of security and regulatory demands, like the financial, governmental, industrial, and defense sectors.

We have our headquarters in Stockholm, Sweden, with offices in Germany, Denmark, Switzerland, and the Netherlands.
