

Secure file transfers with Pointsharp Secure Information Exchange

Enable secure, encrypted transfers of large and sensitive files directly from your email client. Pointsharp Secure Information Exchange is easy for anyone to use without installing additional software, and offers full traceability for easier compliance.

User-friendly

Pointsharp Secure Information Exchange is integrated directly into the organization's email client, making it extremely easy to use with virtually no training. Sending an encrypted file is as easy as sending an email. Our solutions remove size limitations on email clients for easy usage and a smaller footprint on the email server. With ad-hoc sending, neither the sender nor the receiver needs to install any additional software or create a user account.

Higher security

Our solution offers email and file encryption with full traceability. File transfers of large, sensitive, or classified information support both password protection and eID for versatility and additional security.

Made to be compliant

Ensure tamper-proof file transfers in your entire organization. Our certified solution helps you comply with various regulations, such as GDPR, NIS2, and HIPAA. It is also designed to integrate into archiving and document management systems for complete adherence to legal or industry-specific regulations regarding data archiving requirements.

Adapted to your needs

Pointsharp Secure information exchange can be deployed on-prem, in a private cloud, or with our public cloud offer.

In addition, the Pointsharp Secure information exchange API offers deep integration possibilities with Java and .NET and integrations to LDAP and Microsoft Dynamics.

High user adoption

No file size restrictions

Secure and compliant

Automated file transfers

Automate file transfers for mass distribution, machine-to-machine or machine-to-human. System data transfers for any industry can be automated with the automation tools and APIs available in Pointsharp Secure information exchange.

Classification and filters

Enable email classification with the click of a button for compliant, secure messaging. Our integrated file type filters also ensure files are always transferred in the correct format. Our powerful policy engine can use type filter sets to control who can send what content to whom and scan all files for viruses and malware.

Additional features:

- Web-App for ad-hoc usage
- Outlook add-in
- Outlook for the web add-in
- Notes and Domino Integration
- APIs
- Email classification
- File type filter
- Antivirus check
- Automated file sharing
- Support for eID authentication

Pointsharp is a European cybersecurity company that enables organizations to secure authorizations, access, identities, and data in a user-friendly way. Security must be easy to use, and our vision is to give everyone access to a safe, modern digital workplace. We provide specialized IAM solutions that are made to fit the most demanding and specific needs.

We deliver European-made cybersecurity software and services to customers worldwide. You can often find our customers in large enterprises requiring extra high levels of security and regulatory demands, like the financial, governmental, industrial, and defense sectors.

We have our headquarters in Stockholm, Sweden, with offices in Germany, Denmark, Switzerland, and the Netherlands.
