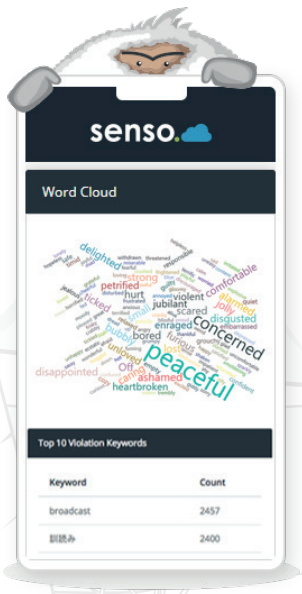
Remote Monitoring and Management

Software for Safeguarding

The next generation cloud-based safeguarding module aids schools in fulfilling their legal duty of care around online safety and safeguarding.

SAFEGUARDING BUNDLE BENEFITS

Our **next generation** cloud-based **safeguarding module** aids schools in fulfilling their legal duty of care around online safety and safeguarding.



- **Keywords Lists.**
  Developed in collaboration with experts and leading charities.
- **Multi-school Reporting.**
  Report across one or more schools centrally.
- **Read Only Logs.**
  Capture and review activity from users.
- **Roles Based Access Rights.**
  Take control of what your users can and can't access.

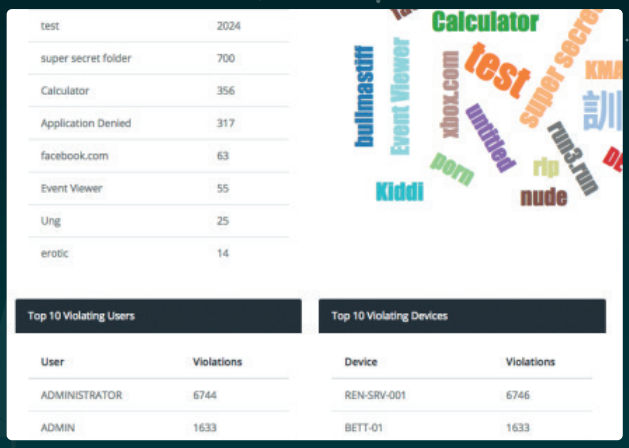
Serious About Safeguarding

Designed with the UK Government Prevent duty, UK Safer Internet Centre,

the UK Department for Education's Keeping Children Safe in Education (KCSiE) guidance and with keyword and URL lists from the Internet Watch Foundation(IWF), our next generation cloud-based safeguarding module aids schools in fulfilling their legal duty of care around online safety and safeguarding.

Backed by Microsoft's read-access redundant storage service, your safeguarding logs are replicated to ensure maximum durability and high availability across their ultra-secure data-centres.

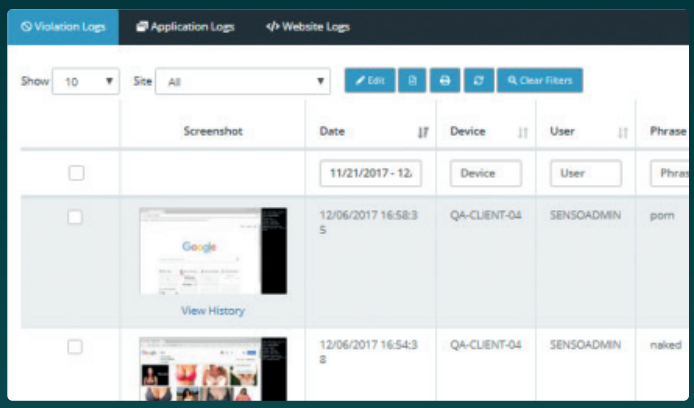
SAFEGUARDING MODULES



Violation Dashboard

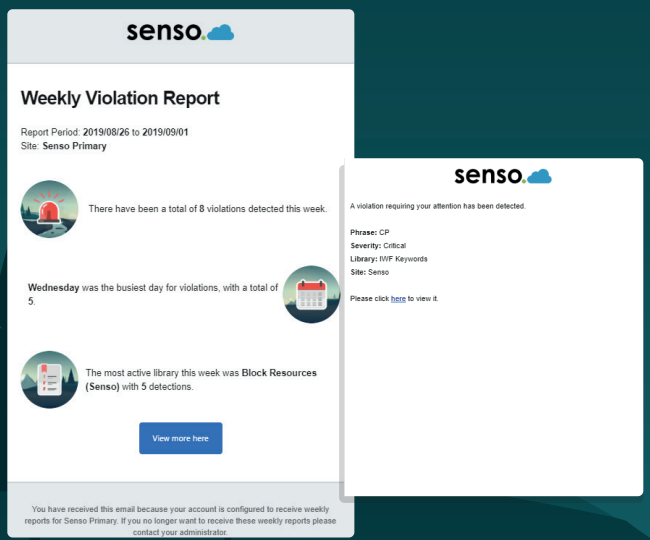
With a top level overview of all violations across a single or multiple site setup, Senso is able to deliver unparalleled insight into users actions and behaviour.

One click drill down improves speed and effectiveness to get to the core of the problem as quickly as possible.



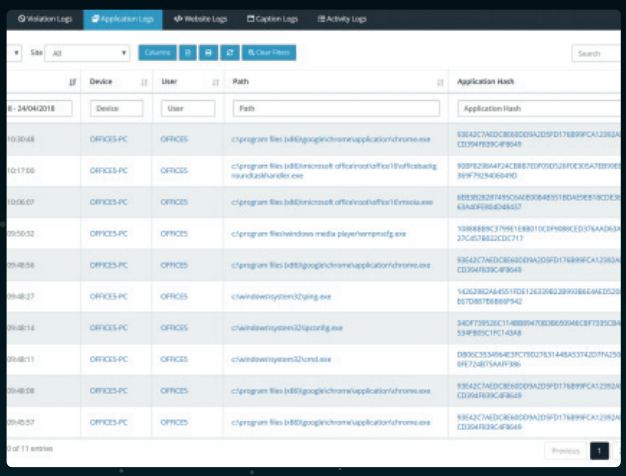
Violation Logs

Designed to allow the review of violations to be slick and seamless, with multi violation select options for batch status and next action changes.



Reporting and Alerting

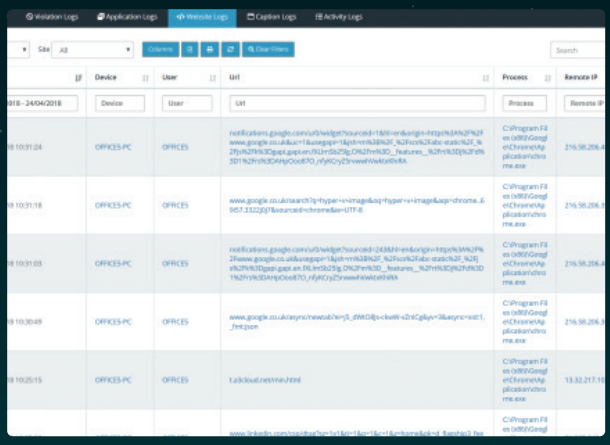
Receive weekly reports to gain a clearer insight into the number of violations made, which days were the most popular and more. Our weekly reports will help you to monitor and protect your devices wherever they are in the world.



Application Logs

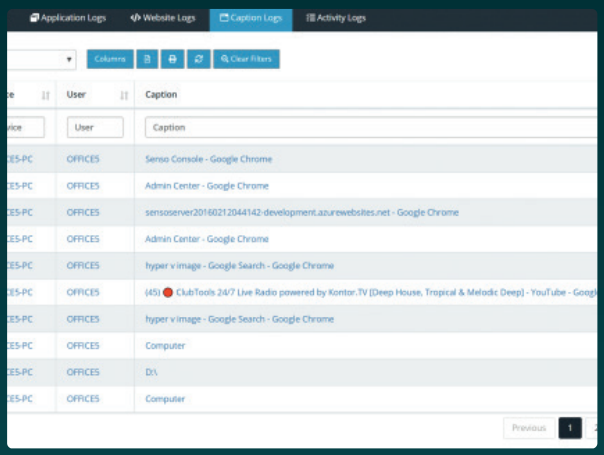
The time when you could just change a file name to bypass the application block list has now gone.

Senso registers and captures the applications hash, allowing for a ban to stay banned.



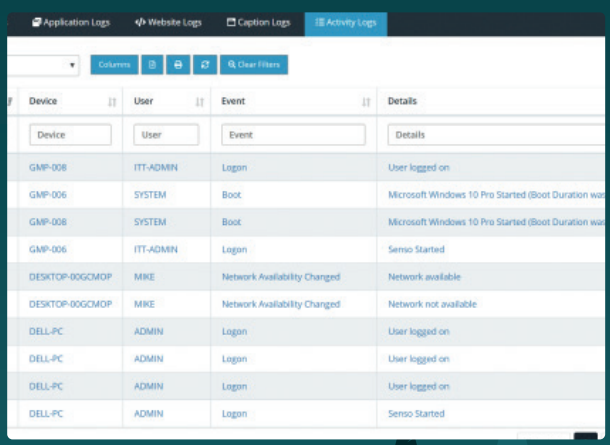
Website Logs

Capture searches and browsing history of users and machines across your estate.



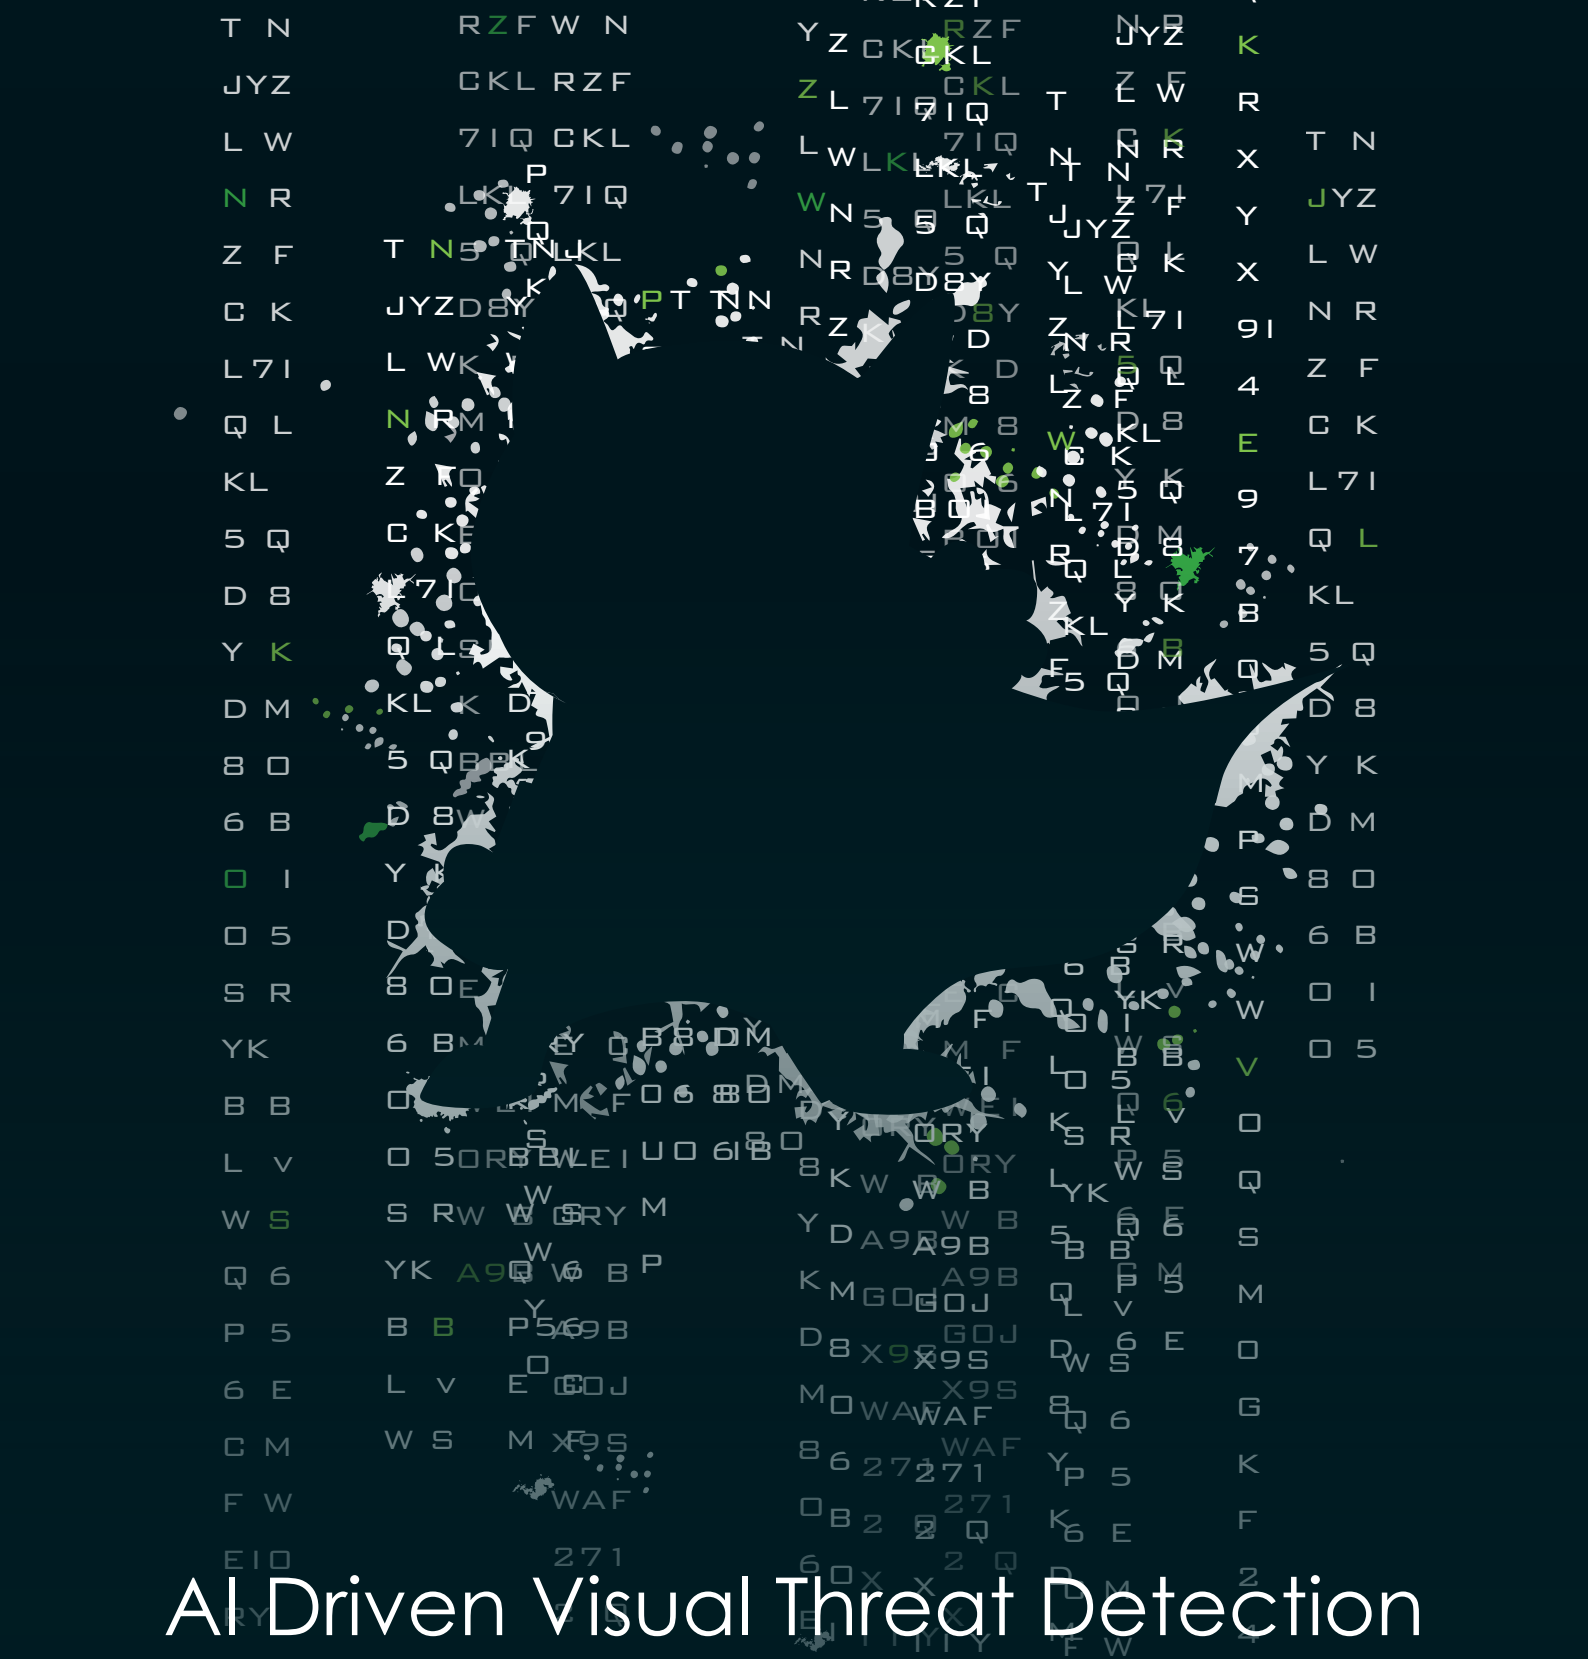
Caption Logs

Senso will capture all active windows on a users desktop, supporting a 360 degree view of activity across a designated period.



Activity Logs

User activity is captured from logon to shutdown, capturing such things as suspicious logon and logoff on critical services, servers, workstations and network devices.



AI Driven Visual Threat Detection

The safeguarding landscape has changed, visual threats are everywhere, legacy solutions offered by technology vendors can be outdated and ineffective.

Only Senso offers a visual threat intelligence feature as a standard component in its safeguarding cloud module, providing early stage actionable intelligence to protect students, identify potential victims and prevent harmful content.

Visual content is everywhere - you can view, save and share easier than ever before. Senso provides a unique solution with visual threat technology driven by categories not general image labelling.
