

RENTAL

Do you invoice actual use of your machines?

If you're in the rental business, you know how important it is to keep track. The day you are distracted is the day you lose money. But now there is a simple solution: Trackunit.

By using GPS monitoring, you can maintain complete control over the location of all your units - and that's not all. You can see their current activity and how hard they are strained. You can avoid fraud. On top of that, Trackunit provides you with the data you need for invoicing, budgeting, investment planning, stock control, service planning and much more.

Get organized with Trackunit

- Which of your machines are in stock or rented out at this moment?
- Does the customer pay for all the hours he used the machine?
- Are your machines serviced on time?
- Does your depot have the right machine for the job?
- Do you know the exact location of all your machines?
- Are you aware of the benefits of controlling access to your machines?

Intelligent fleet management

Trackunit Fleet Management System enables rental companies to streamline fleet management and achieve more profitable operations. The information from the system is shown directly on your computer or smartphone.

Thoroughly tested

50,000 units are currently in use by more than 2,000 companies because an investment in the Trackunit planning and fleet management system brings a return on investment in less than one year. Can you afford to do without it?
