How well do you manage your trucks?

How many of your trucks are making a profit for you right now? Do you know exactly where they are and their exact mileage?

The surveillance and planning tool Trackunit gives you a complete overview of your fleet. With the actual position of each vehicle shown on a map on your computer or smartphone, Trackunit is a valuable tool that helps significantly improve your logistics planning.

By keeping track off maintenance and service, Trackunit also enables you to optimize your service and maintenance strategy helping you reduce downtime and garage waiting time.

Finally, Trackunit documents working hours down to the minute. This ensures accurate invoicing based on explicit documentation.

Trackunit provides you with the answers:

- Do you know where your trucks and trailers are right now?
- How much driving-time do your drivers have left?
- Do your trucks arrive on time?
- Do the customers pay for the actual mileage?
- Are your trucks maintained regularly and on time? And do you have a maintenance plan?
- What is the temperature in your refrigerated trailers?
- Do you know which vehicle is closest to a new pick-up?

Intelligent fleet management

With a variety of innovative features, Trackunit optimizes your fleet management and increases your revenue. The Trackunit reports give you the exact information you need to boost your business and you can access the system through your computer or smartphone.

The Trackunit Fleet Management System is developed and produced in Denmark.

Thoroughly tested

Today, more than 2,000 companies have installed Trackunit in 50,000 units. Why? Because Trackunit is an investment that brings a return on investment in less than one year. Can you afford to do without it?
